

Product: NEUTROTAN KP

General characteristics: Neutralising synthetic based on naphthalene-sulphonic and buffering salt

Chemical nature:

pH 10% solution:	7,5-8,5
Light fastness:	Good
Solubility in water:	Easily soluble
Charge:	Anionic
Appearance:	Beige powder
Fields of use:	Shoe upper articles

Properties:

NEUTROTAN KP is a neutralising synthetic with a good buffering effect.

NEUTROTAN KP on chrome leather in shoe upper articles gives a compact neutralisation , it complex the acidity of chrome and other mineral tanning agent .

In combination with sodium formiate and sodium bicarbonate to obtain a good neutralization with out destroy the fibre of leather.

NEUTROTAN KP improve the penetration of retanning and dyeing process, therefore we obtain a uniform colour.
