

Product: BATIAL Z1000

General characteristics: Blend of pancreatic enzymes

Chemical nature: Pancreatic enzymes

pH 10% solution: 6,0 – 7,0

Enzymatic units: Approx. 1000

Activity field: pH 7,0– 9,0

Appearance: Brown powder

Fields of use: Bathing agent for precious hides

Properties:

BATIAL Z1000 is a classic macerator for precious hides such as calf skins and young goat 's skins, where it thoroughly cleans the grain, making it fine and elastic.

BATIAL Z1000,if used in low percentages, can be used for the processing of hides that must preserve a sustained touch.

If used in greater doses ,it can be used for soft hides such as nappa and softy.

The action of **BATIAL Z1000** is energetic and processing times must be followed carefully because they must never be too prolonged.

USE:

Recommended doses are listed here for some of the most common types of hides processed:

- 0.4%to 0.8%is used for calf skins for shoe uppers;
- 0.4%to 0.8%is used for bovine hides for shoe uppers;
- 1%to 1.5%is used for bovine hides for nappa;
- 1.5%to 2%is used for young goat 's skins;
- 0.6%to 0.8%is used for ram 's skins for shoe uppers or linings;
- 1.5%to 2.5%is used for pigskins for garment.
